Speech Therapy

Speech therapy supports children in developing effective communication, language, speech, listening, reading, and writing skills. Early identification and intervention play a vital role in helping every child reach their full developmental and learning potential.

Speech therapy may benefit children who:

experience speech or pronunciation difficulties

- require support with language and communication development
- have challenges with listening and auditory processing
- need assistance with reading and writing skills
- stutter or stammer
- have developmental delays or additional learning needs
- are on the autism spectrum; or
- require support with language development when learning English or Afrikaans as a second or third language.

Each assessment and therapy programme is individually tailored to meet the child's unique needs, strengths, and developmental level. Where appropriate, the speech therapist works closely with the occupational therapist and other professionals to ensure a holistic approach to each child's development.
